

Normal case: flats must be shifted left a little, but not the last one:

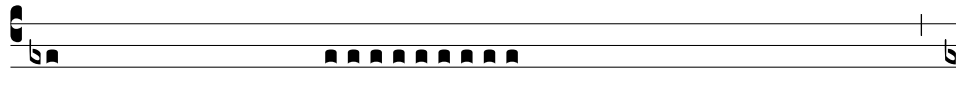

a      bbbbbbbb i   i                      i                      g

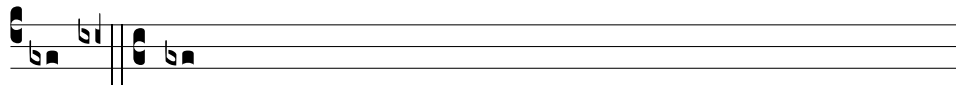

Breaking line after each bar with a big value of `alterationadjustmentbar`, to check that it doesn't interfere with spacing at the beginning of a line:

a                                              bbbbbbbb

i                                              i

i                      g
